

## FIRM PROFILE

Fuller Consulting Engineers, Inc. was founded in 1997 to provide structural engineering services to architects, contractors, fabricators, owners and others associated with the building industry. The principals desired to create a business founded on integrity, engineering expertise and high quality service. Since its conception, FCE has provided structural engineering services for a broad range of building types including commercial, industrial, institutional and public projects.

While most of the facilities have been built in the Southeastern United States, FCE has engineers licensed in forty-one states to meet our clients' growing needs. Our building designs have been located in some of the most environmentally challenging areas of the USA. These environs include hurricane coastlines, areas of high seismicity, regions of heavy snow loads, and challenging geotechnical locations that vary from the marshes of southern Louisiana to the bedrock of the Great Lakes.

The firm offers a full range of structural engineering services, ranging from preliminary planning through design and construction phases. In addition to designing buildings, our staff can help with bridge design, specialty foundations, tilt-wall panel detailing, steel connection design, and many other unique structural designs. Our engineers have extensive design experience with concrete, steel, timber and masonry building materials.

Our engineers and designers are trained in using the latest technologies including Building Information Modeling (BIM) design. We also have engineers that are LEED certified and able to help clients with the implementation of environmentally friendly building designs.

Our company prides itself in satisfying architects, contractors and owners alike. We believe every project should be successful, and we are committed to making that happen.

### **DEDICATION:** to Quality Engineering and Project Success

To Fuller Consulting Engineers, dedication means a single-minded focus on high quality structural engineering services. In the ever-increasing speed of business and construction, dedication means maintaining a firm grasp on critical details and client priorities for total project success. Towards that goal, we do what is necessary to ensure deadlines are met, and a high level of quality is maintained.

### **EXPERIENCE:** in a Range of End Uses and Designs

Our engineers and designers bring a practical understanding of the building industry into their designs. Many of them have worked in construction as managers or supervisors, and they make sure they know how their work will come together in the field before they send it out.

### **INGENUITY:** to Manage Project Challenges

Talk to us about what you want to do. Tell us about tight budgets, physical constraints, or tight deadlines. Every project has its special challenges, and we overcome them with ingenuity and creativity. Challenge us and we will deliver results.
